PROJECT EASI/ED
BUSINESS AREA REQUIREMENTS DOCUMENT

Version 2.0

This document updates the *Project EASI/ED Business Area Requirements Document, Version 1.0*, dated July 1, 1997. The *BARD*, *Version 2.0* defines the Project EASI/ED requirements in narrative form.

Some highlights of the differences between Version 1.0 and Version 2.0 include:

- Current systems mapping to Project EASI/ED requirements have not been reproduced in Version 2.0. These mappings represent historical information that informed the creation of the target Data Flow Diagrams (DFD's) in the *BARD, Version 1.0*. The DFD's have since been superceded by the processes and interfaces presented in the *Project EASI/ED Application Services Definition Document: Subsystem and Interface Definition*.

- DFD's and the Entity-Relationship Diagram (ERD) reside only in Version 1.0. The DFD's became processes and interfaces in the *Project EASI/ED Application Services Definition Document: Subsystem and Interface Definition*. The ERD became the Logical Data Model, presented in the *Project EASI/ED Logical Data Model Document*.

Please replace the contents of the *BARD, Version 1.0* with the contents of the *BARD, Version 2.0*. In addition, please insert the new cover and spine into the old binder to match the new version of the *BARD*.
